

LOAD BALANCER QUIZ

Good job!

Correct!

Question 1:

You have a web app based on App Engine in the `us-central1` region. There are no expansion plans to other regions. What type of load balancer should you use for this app?

Regional Internal Application Load Balancer

Regional External Application Load Balancer

Global External Application Load Balancer

Good job!

Correct!

Question 2:

What is the role of the Network Endpoint Group (NEG) when configuring Load Balancer?

To group IP addresses that the Load Balancer routes traffic to.

To define firewall rules for a VM instance.

To allow cross-VPC traffic.

Good job!

Correct!

Question 3:

You have an IoT system listening to IoT devices from all over the world. The devices use the TCP protocol to send messages to the cloud, and the system itself is deployed on multiple regions.

What type of Load Balancer should you use for this system?

Global External Application Load Balancer

Regional External Proxy Network Load Balancer

Global External Proxy Network Load Balancer
